ACT 1:

ROBOT OBSESSION

Mission Failed.

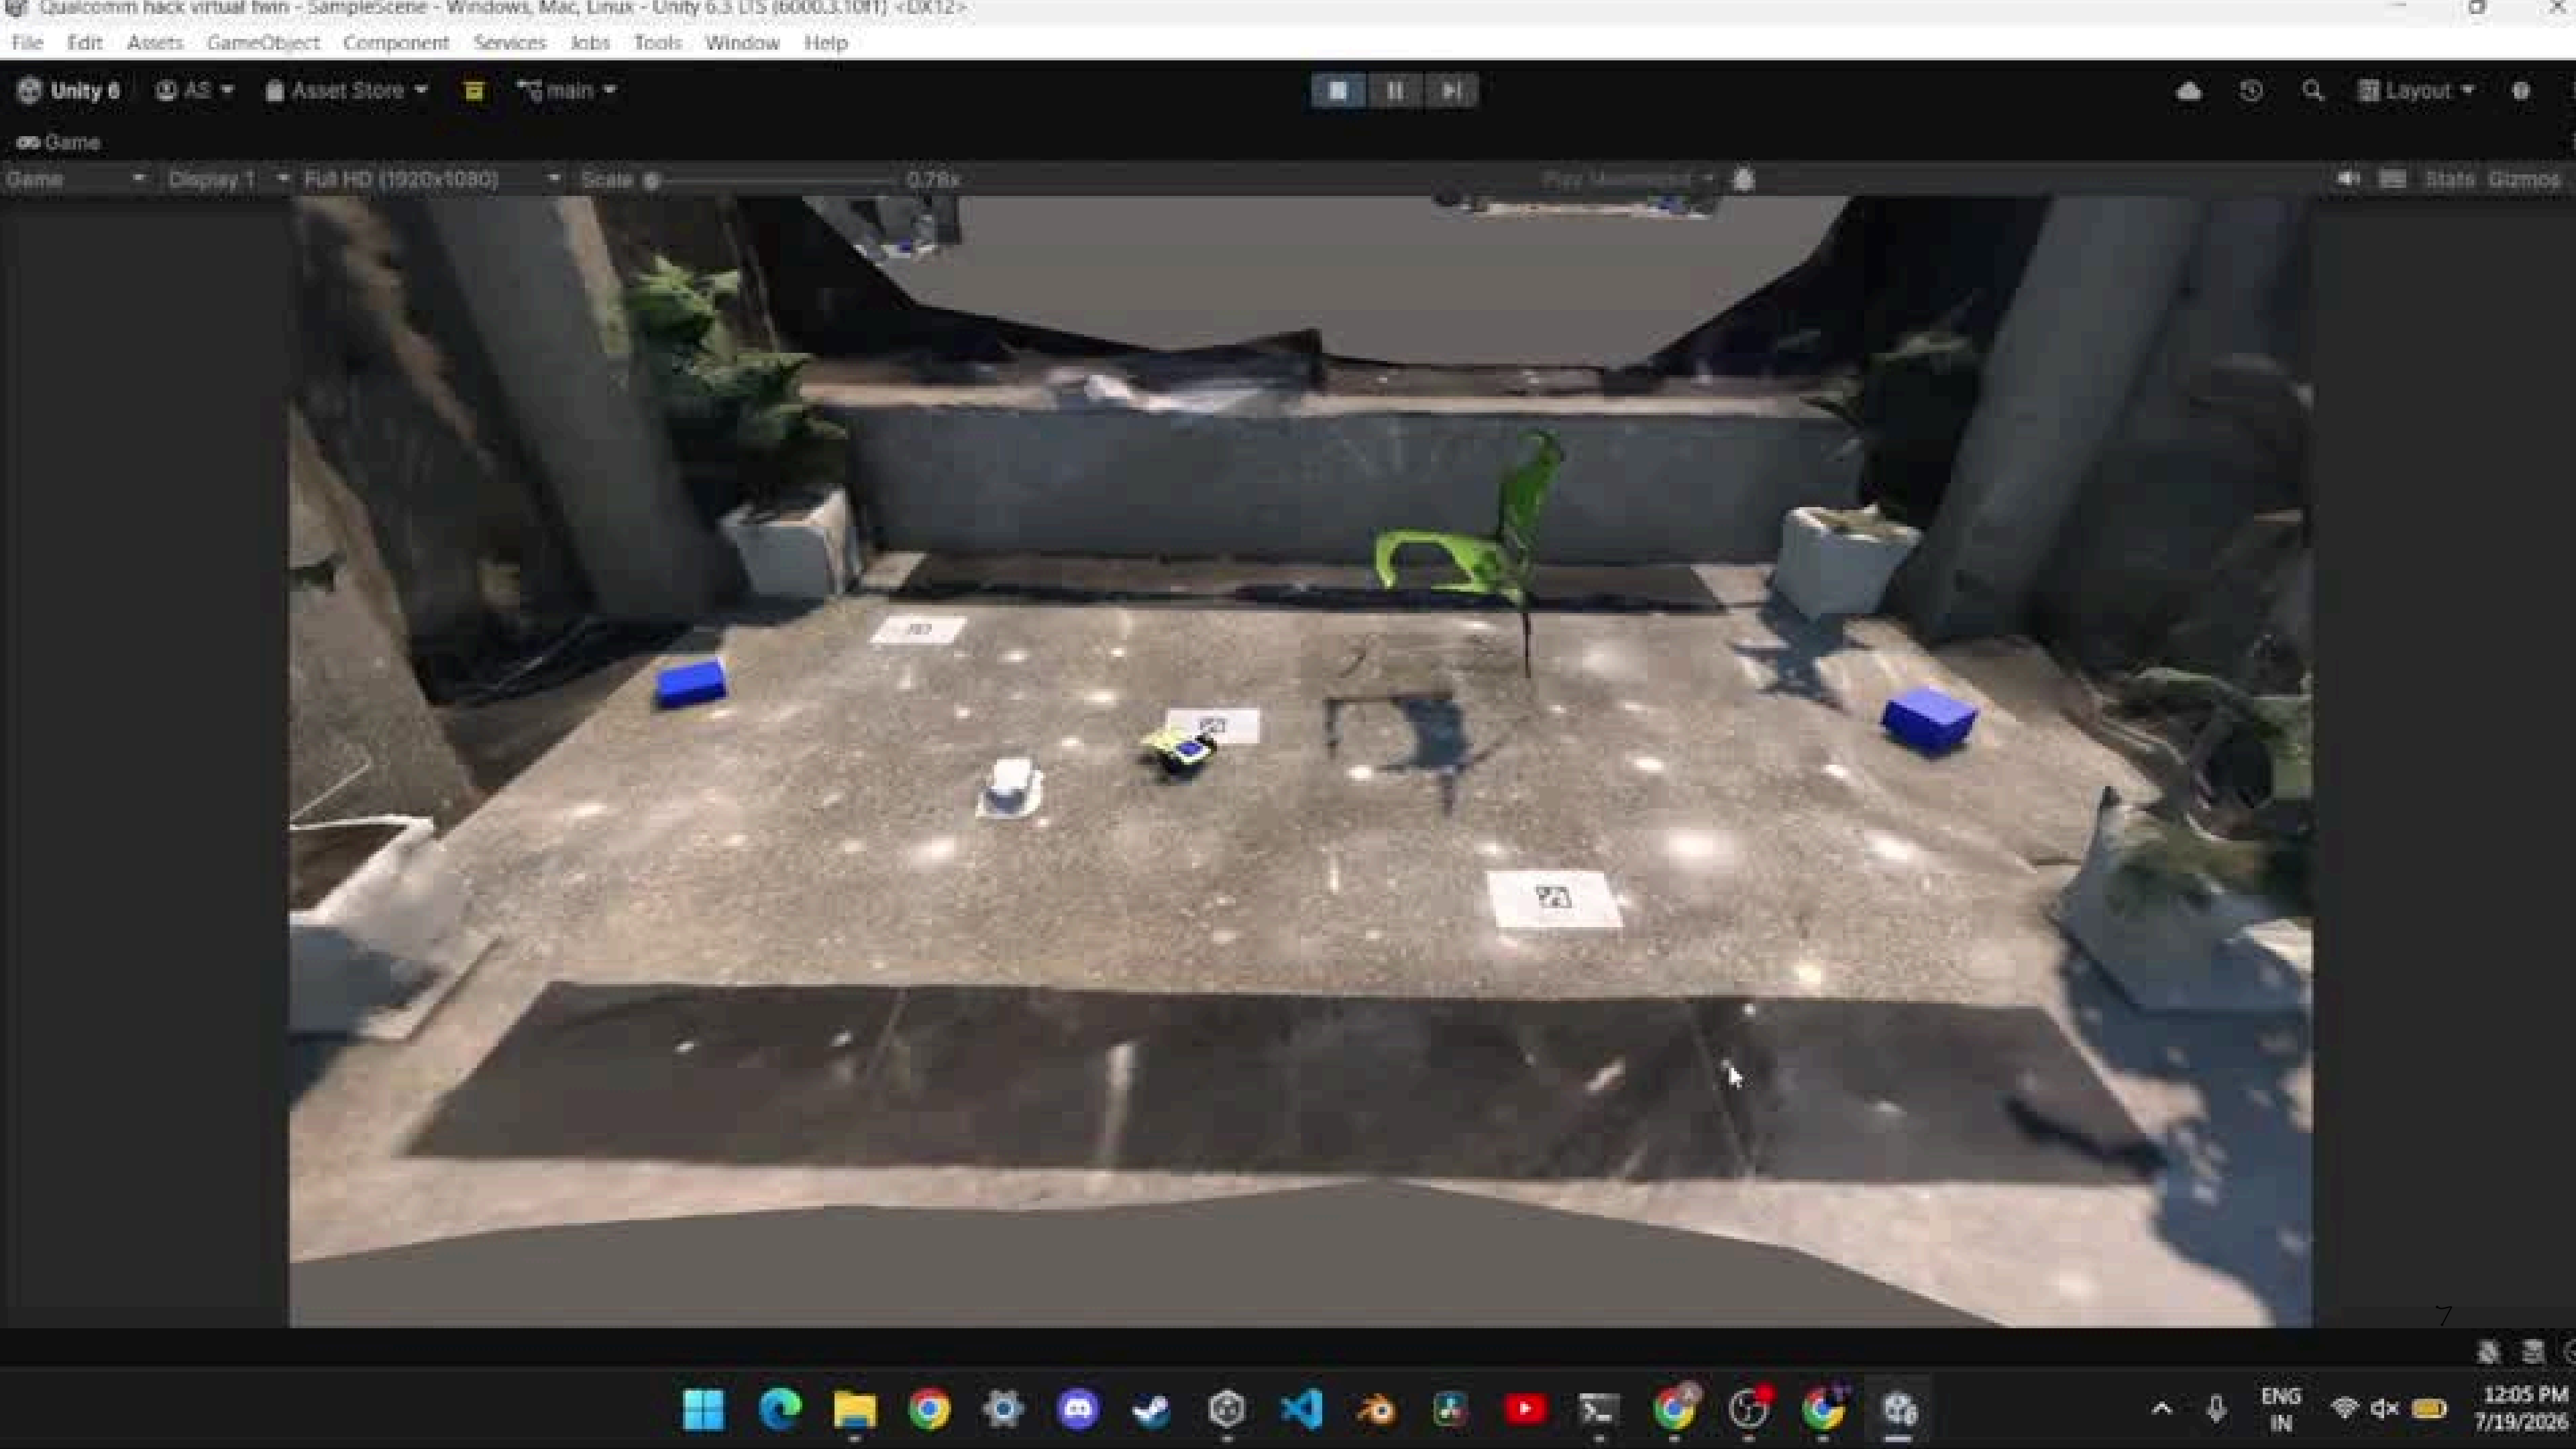

TECHNOLOGY

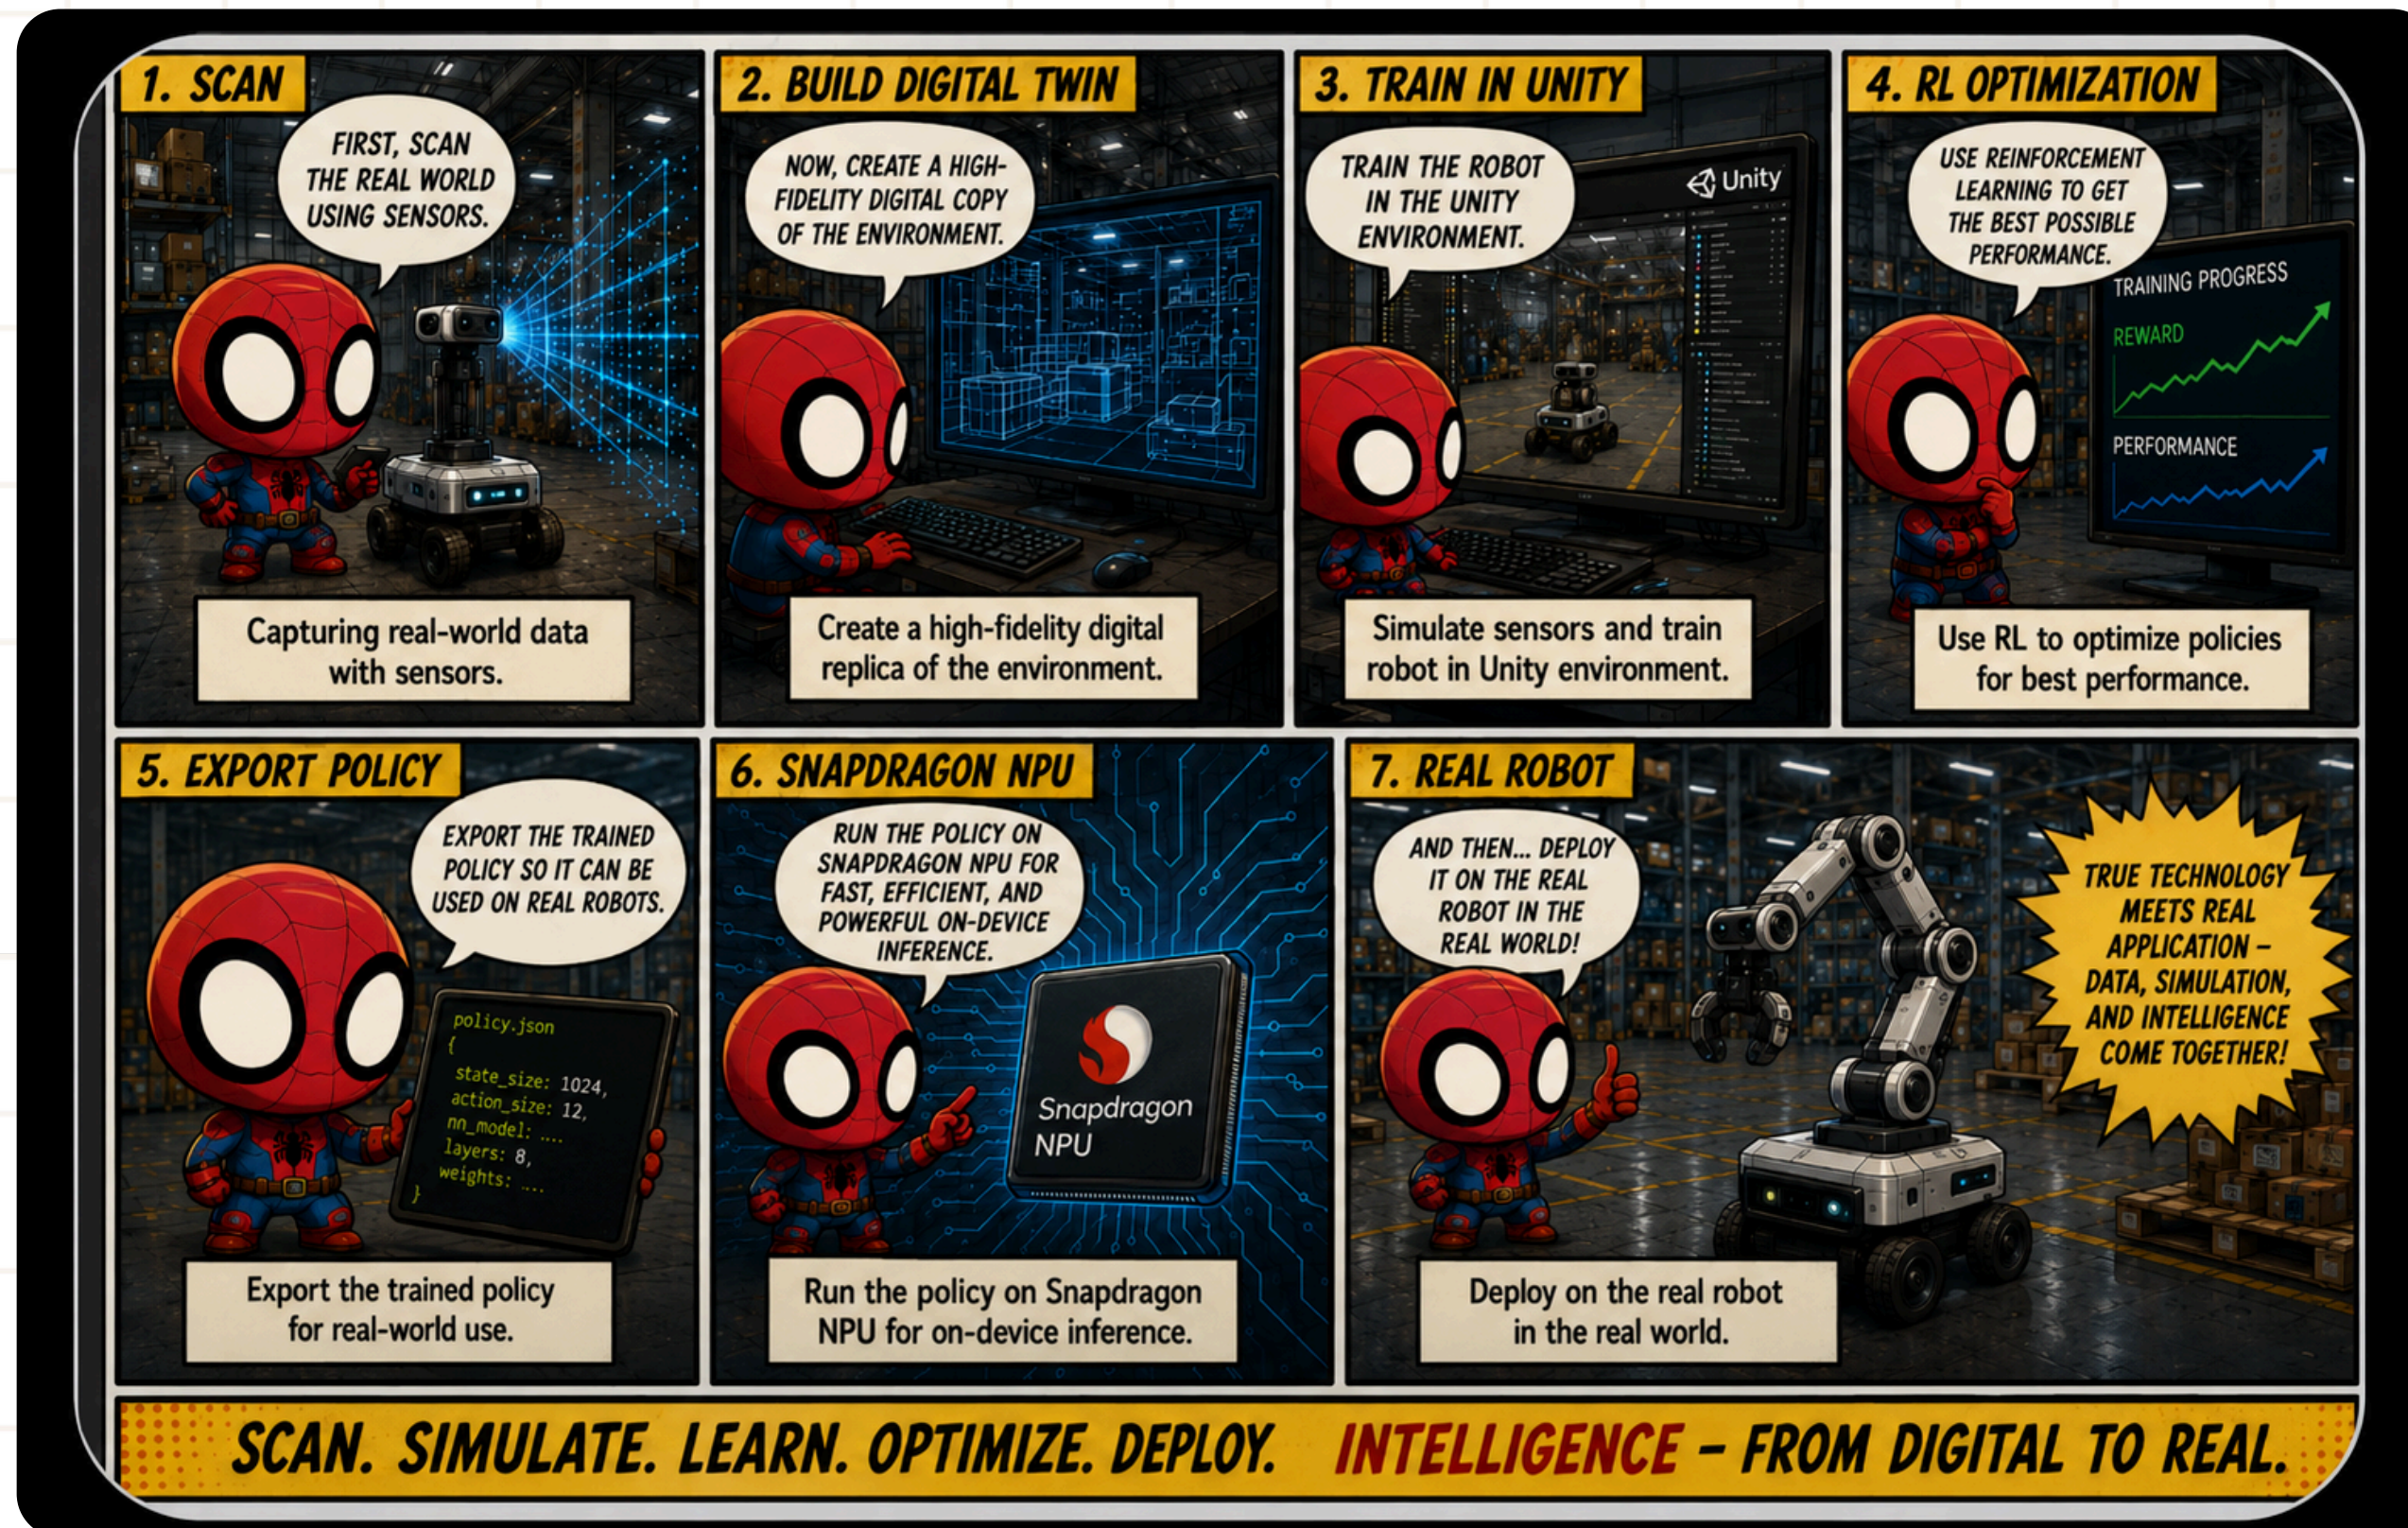

ACT 2:
DEMO!

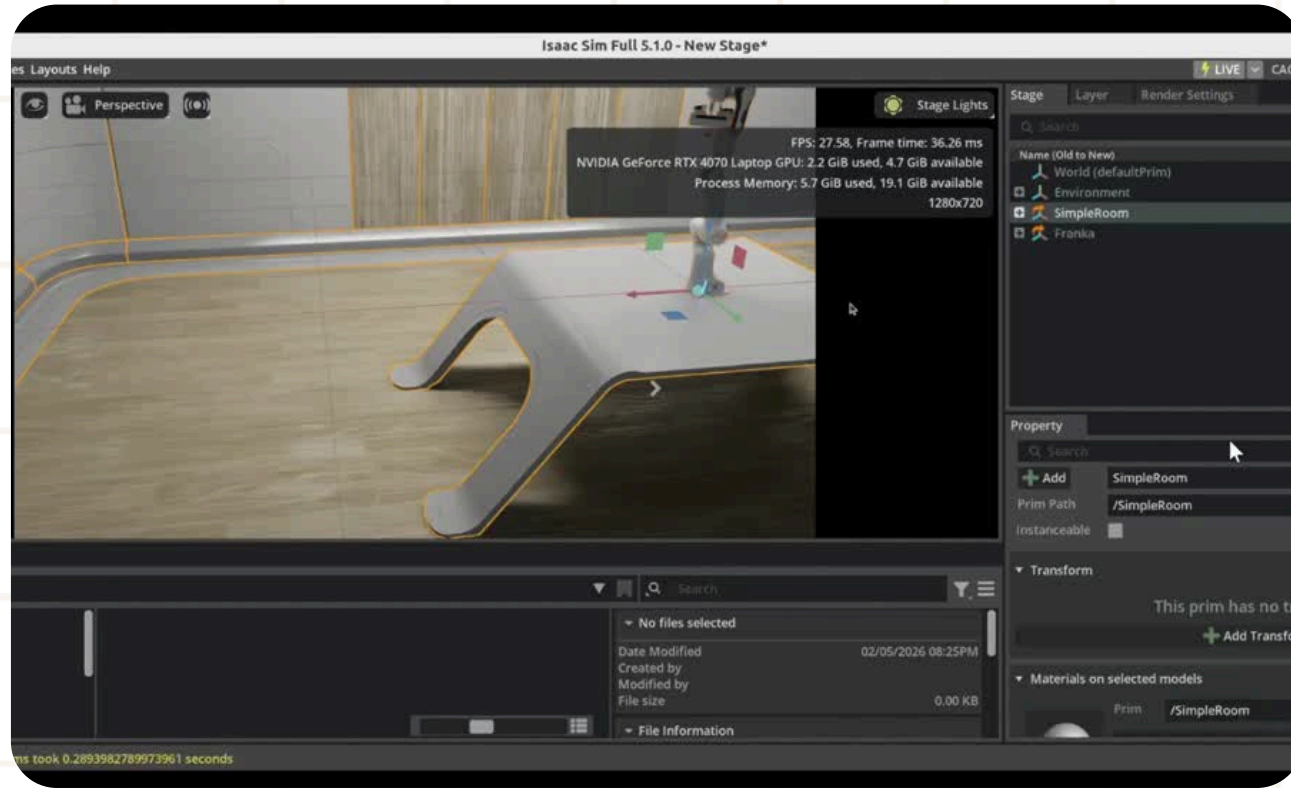

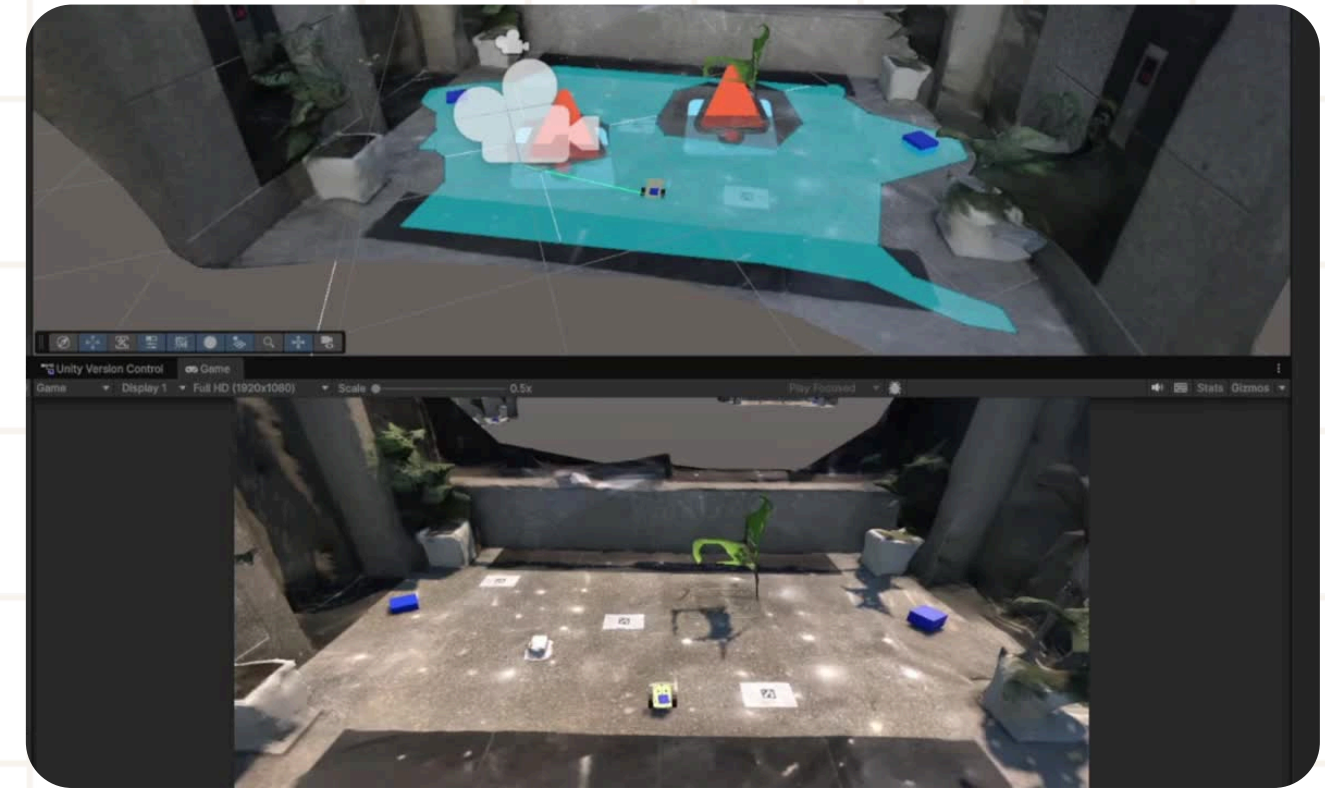

Workflow

OMNIVERSE v/s DRAGVERSE

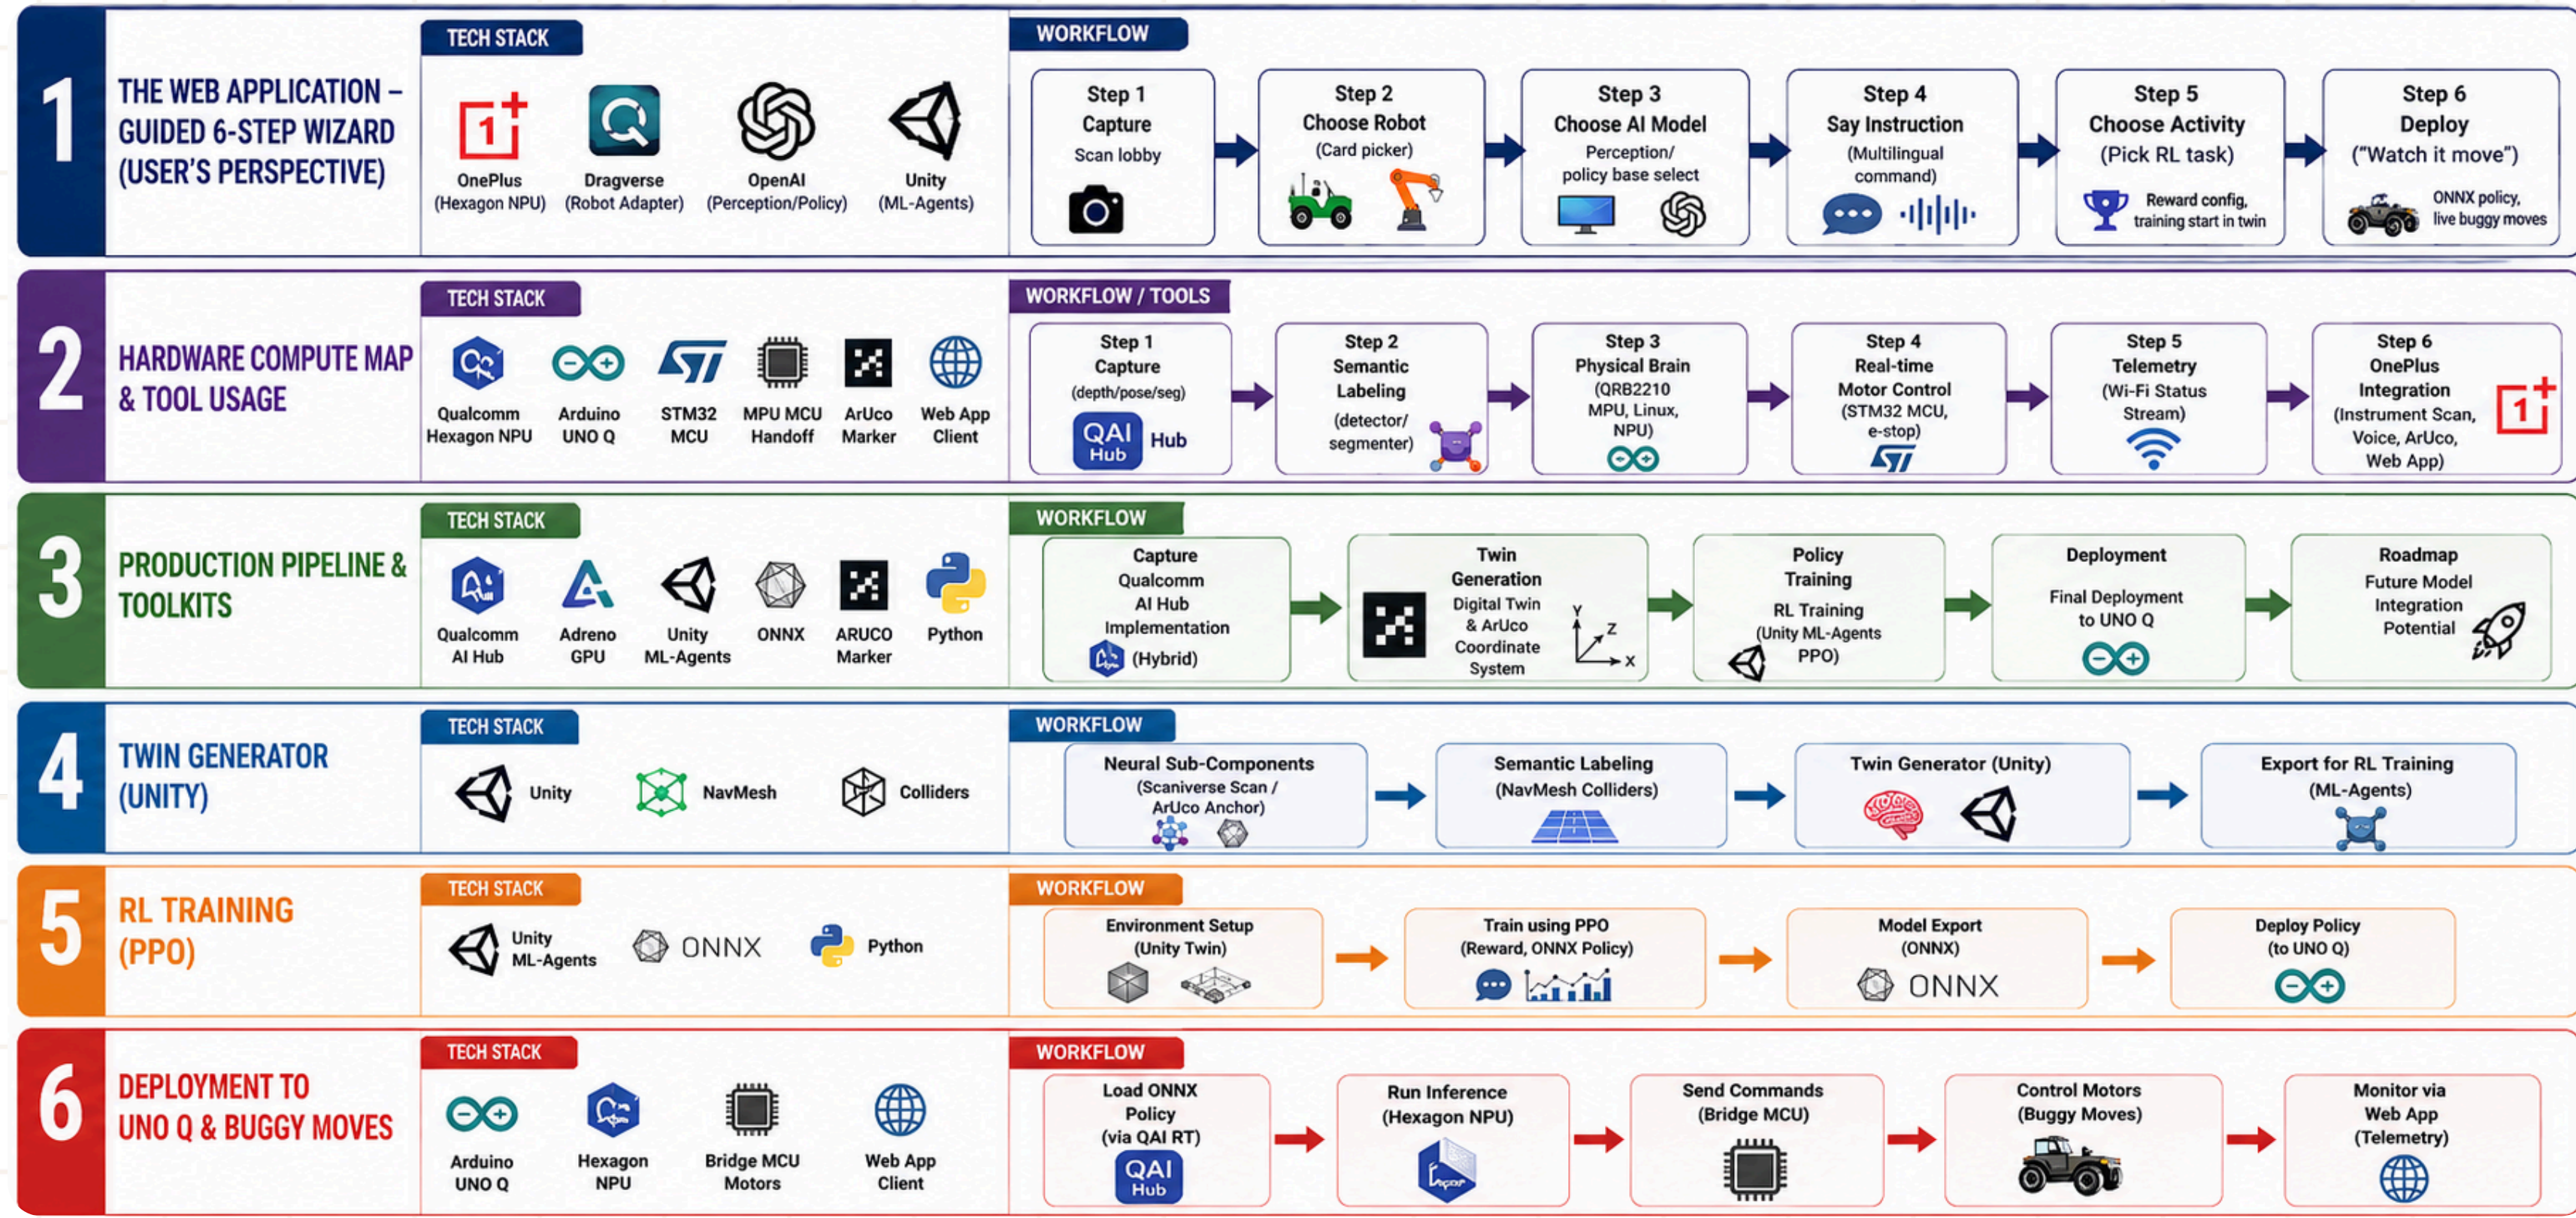

- Manual scene creation and simulation setup.
- Multiple tools required for training and deployment.
- High-end RTX hardware recommended for optimal performance.
- Higher engineering effort and longer development cycle.

- End-to-end: Scan → Train → Deploy in one platform.
- Minutes, not days: Auto-generates robot-ready digital twins.
- Edge-first: Optimized for Qualcomm on-device AI.
- Lower cost & faster development through automation.
